Dear Jessica,

You contacted this office requesting information on any known wildlife habitats occurring at a .25 acre property known as Lot 119 in the village of Popham. This property is nearby, but not within a Least Tern/Piping Plover Essential Habitat. MDIFW has also documented breeding habitat for Endangered Roseate Terns and Threatened Least Terns offshore on the Sugarloaf Islands.

Though most development will reduce the quantity and quality of wildlife habitat, I expect this development will have minimal impact on regional wildlife resources and management goals. Please contact me if I can be of assistance with wildlife habitat issues during your planning process.

Sincerely

Scott Lindsay
